

Information to consider

STYLES

BACK TO WALL

Rear of toilet is flush to the wall with waste and inlet pipes concealed.

CLOSE COUPLED

The lines of the tank merge neatly with the pan ensuring good looks and effortless cleaning. Check the models as can be S or P Trap compatible.

WASTE OUTLETS

VARIO INSTALLATION

Ideal for tricky situations with variable set out.

A toilet that is 'vario' is suitable for both S and P-Trap waste outlets. A specific connector is required. This is included.

S-TRAP

Currently the preferred system when constructing new homes.

For an S-Trap (through the floor), check the 'set out' measurement, which is the distance from the wall to the centre of the existing waste outlet.

P-TRAP

More often used in villa and bungalow restorations and renovations.

The P-Trap (through the wall) has a standard height and should be 185mm (+ or - 5mm) from the floor to the centre of the waste outlet in the wall.

WATER INLETS

REAR INLET

A more recent trend where the inlet pipes are concealed behind the tank. An uncluttered and more popular piping option.

BOTTOM INLET

Plumbing for the inlet is separate and does not determine tank location. Suitable for a variety of water inlet positions.

FEATURES

QUIET-CLOSE™

Engineered to close slowly at the slightest touch, reducing noise and increased hygiene.

QUICK-RELEASE™

Enables swift and easy removal without tools for easy cleaning.

COMFORT HEIGHT

Increased height for improved sitting comfort. Feature is available on Milano and Valencia toilets.

BOX RIM

Englefield box rim pan is fully glazed to make cleaning easier. Water is distributed around the bowl more efficiently as water is flushed through holes under the rim, hence a better controlled flush, a better clean, and efficient use of water.

OPEN RIM

This creates a powerful flush and clean as water is released from the tank and creates a swirling motion that cleans the bowl.

IMPORTANT TO KNOW

WATER EFFICIENCY LABELLING SCHEME (WELS)

The New Zealand WELS is designed to inform consumers with water consumption and water efficiency information to help them make a smarter decision when purchasing water-using products.

Rest assured that all Englefield's toilet components are fully tested and comply with the AS/NZS 6400 standards.

Look out for the WELS sticker on your next toilet suite purchase.

WARRANTY

Tanks & pans, 5 years. Seats, seals & washers, bumpers & hinges, flush & fill valves, 2 years.
